

Edging & Bracing Class

Course Overview

Edging and bracing are essential kayaking skills that help with stability, control, and maneuverability in moving water. We explore all the strokes taught in the Intro to Kayaking course, while edging our kayaks.

Edging will help you make tighter turns, prevent the current from flipping you and enhance boat control in rapids.

Bracing is a technique to prevent capsizing when you lose balance. It involves using the paddle to push against the water and regain stability. Use bracing to recover from sudden tilts, maintain stability in waves and currents, and stay upright while surfing or carving turns.

We end with a lecture on weather and sea state that is required when planning short excursions.
